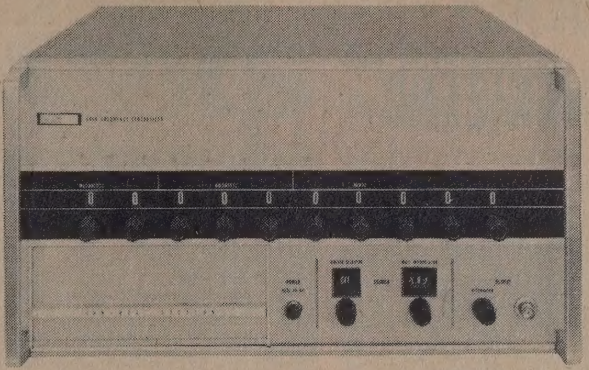
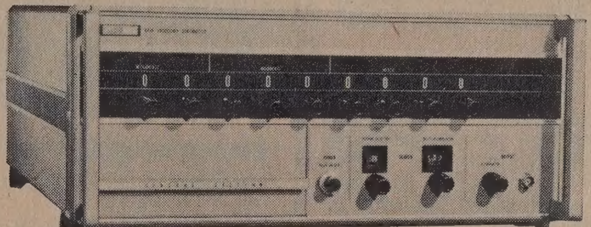
Fluke Frequency Synthesizers



New **Model 645** offers, in addition to the specs listed below, a phase noise floor of 135 db/Hz at 5 Hz and close-in noise of 100 db/Hz at 10 Hz offset.



Model 644. Models 633 and 622 are similar except for fewer decades.

The Fluke family of frequency synthesizers offers outstanding performance in easy to use, functionally styled, relatively small packages. Four instruments cover the frequency range of DC to 50 MHz. Non-harmonic spurious content is as low as 100 db below the fundamental.

Model 645 covers DC to 50 MHz; Model 644, DC to 40 MHz; Model 633, DC to 11 MHz; and Model 622, DC to 2 MHz. All feature, in addition to exceptionally low spurious content, high signal-to-noise ratio, modern packaging, in-line, in-plane frequency readout, and fast remote programming. Frequency can be changed in microseconds.

Special Models. All Fluke synthesizers are modular in design, permitting customizing of individual units to meet special requirements quickly and economically. Such modifications include dual tracking outputs with fixed separation and separate fixed frequency outputs and 0.01 Hz increments on some models where this feature is not standard.

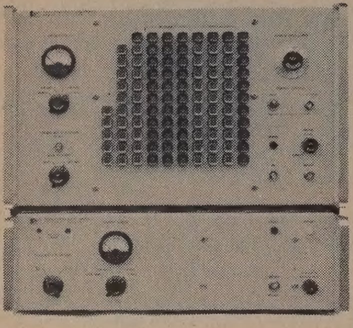
FREQUENCY SYNTHESIZERS



5105A

HP Frequency Synthesizers have been field proven in some of the most demanding commercial and military applications. Yet they are available at commercial instrument prices. Many people select them after exhaustive testing under environmental extremes, being the only ones tested that would provide adequately stable output frequencies and low output noise under shock and vibration.

HERE ARE SOME KEY CAPABILITIES:

- Frequency change by pushbutton or remote command (20 μs, typical).
- Frequency increments as small as 0.01 Hz.
- Search oscillator for continuous tuning or sweep capability.
- Low spurious signals, low phase noise, high spectral purity.
- Direct synthesis for best stability, fast switching, failsafe operation.

Model	Range	Minimum Increment	Price
5105A	100 kHz–500 MHz	0.1 Hz	$14,100.*
5100B	0.01 Hz–50 MHz	0.01 Hz	$12,500.*
5102A	0.01 Hz–100 kHz 0.1 Hz–1 MHz	0.01 Hz 0.1 Hz	$ 7,200.**
5103A	0.1 Hz–1 MHz 1–10 MHz	0.1 Hz 1 Hz	$ 7,800.**

*Includes required 5110B Driver ($4350) which operates up to four synthesizers.

**Dual range unit; has internal driver.

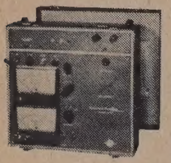
INSULATION TESTING INSTRUMENTS

ASSOCIATED RESEARCH, INC.

Portable DC HYPOTS® to 100 KV



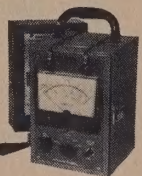
Output of the several portable DC HYPOTS is continuously variable from 0 to maximum with the voltage metered directly in the output. Leakage current measurements are on four range meters reading down to as low as 0.05 microamps. Features: 2% metering accuracies, electronic circuit protection, by-pass and metered return terminals, grounded steel cases, silicon rectifiers, plug-in high voltage leads, etc.

Model	Output Voltage	Output Current	Price
5205	0-5 KV	2.0	$ 550
5212	0-10 KV	2.0	675
5220	0-15 KV	2.0	735
5271	0-50 KV	2.5	2250
5321	0-100 KV	5.0	3115

Request Portable DC HYPOT Bulletins

Insulation Resistance Testers

Ranges from 100 to 10 million megohms at test potentials to 10 KV.



The VIBROTEST megohmmeter provides a wide selection of battery and line-powered instruments for accurate insulation resistance measurements of circuits, components, cables, motors, etc. They are direct reading and push button operated requiring no cranking or leveling.

Select from 17 models ranging from pocket-size to portable 10 KV with variable voltage. Some models combine megohm with ohm and AC-DC volt scales in one instrument. Five popular models are:

Model	DC Test Voltage	Max. Megohms	Features	Price
2000	500	100	Pocket-size	$ 95
201	500	200	Includes 2K ohm and six AC-DC volt scales	148
211	1000	2000	200 K ohm range	255
2850	500/50	10 Million	Constant test voltage through 6 decades	345
2955	0-2,500	50,000	Adjustable test voltage	890

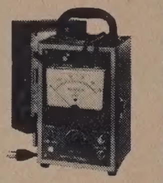
Request VIBROTEST Megohmmeter Bulletins by model number.

Testing Manual Available

This 60 page collection of Bulletins covers specs, prices and applications of insulation resistance testers, AC HYPOT Juniors, portable and mobile DC test sets, corona and materials test equipment, kilovoltmeters, precision ohmmeter, current transformers, phase sequence indicators.

Request Manual 2900 on company letterhead

A-C HYPOT Jrs. . . to 10 KV, limited current



Portable a-c dielectric strength testers providing outputs continuously variable from 0-1500 V up to 10,000 V a-c. Use of neon breakdown and leakage current indicators in conjunction with collapsing field-type high voltage transformers assures rapid and safe production testing.

The leakage current indicator is adjustable from 0.3 to 3 ma. A 4½" kilovoltmeter provides high accuracy. Short-circuit current cannot exceed 18 ma.

Three popular models are:

Model	Output Voltage	Price
411	0-2,500	$155
404	0-4,000	170
422	0-10,000	245

HYPOT Jr. Automatic "Squawker" Models

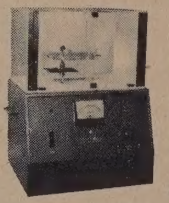
Available with output voltages from 0-1500 volts to 0-6000 volts a-c. Similar to the standard HYPOT Jr. models but include an audible signal unit and external control terminals.

DC and Combined AC/DC HYPOT Jrs.

offer same features as described above, plus test potentials to 5 KV.

Request AC & DC HYPOT Jr. Bulletins.

Insulating Materials Testers



A full range of testers for solid and liquid insulating materials to 100 KV and higher is available. Due to the rapid progress of insulating materials and testing techniques, new equipment is added whenever required to meet ASTM, MIL and Federal test specifications.

Model 4501 Materials Testing HYPOT 0-35 KV at 2 KVA

This popular model meets dielectric strength testing requirements of Specification D-149, ASTM Standards on Electrical Insulation Materials. Output continuously variable from 0-35 KV a-c at 2 KVA (intermittent rating). Magnetic breaker trips when specimen breaks down. Output termination in jacks at center of the lucite cabinet top accepts the interchangeable ARI materials testing fixtures. Optional features: interlocked clear lucite test cage and selection of ARI plug-in materials testing fixtures, automatic rate of rise, dual sensitivity circuit breaker, etc.

Request Insulation Materials Tester Bulletin

High Voltage Test Equipment to 500 KV AC and 1,000 KV DC

A full range of instruments for extra high voltage dielectric strength testing. AC or DC potentials at capacities of up to 150 KVA or more. Control and measurement features include: automatic rate of voltage rise, memory circuit to record breakdown voltage, output current metering, separate low voltage control and high voltage test cabinets and many others.

AR has over 30 years experience in the design and manufacture of heavy duty very high voltage test equipment. All instruments are ruggedly constructed and fully tested in our own high voltage laboratory.

Corona Testing Equipment

New instruments detect, display and measure corona caused by voids, surface or other conditions in insulation sample or equipment under test.

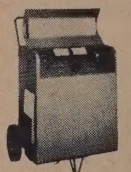
Instruments include: specially constructed corona-free HYPOT test set, a pickup network to extract the true corona signal and the corona detection display module. The detector also incorporates a calibrator to make quantitative corona measurements down to 0.1 picocoulombs.

These modules are available as individual units or as a complete integrated instrument. Standard models with test potentials of 10 to 100 KV AC include these two popular models:

Model	Output KV	KVA Capacity	Cabinet Style	Price
4074	10	0.25	Bench	$2250
4309	35	1.0	Console	3950

Request Bulletin 4-1.9.

Mobile HYPOTS . . . to 150 KV DC



Heavy-duty mobile test sets for determining insulation leakage and dielectric strength of cables, bushings, switchgear, transformers, motors and generators.

Outputs continuously variable from 0 to 45 KV and on up to 150 KV, with ratings of 2.5, 5, 10 ma. at full voltage.

Features include: 4½" kilovoltmeter connected directly across the high voltage output; three-range 4½" microammeter electronically protected against overload; zero return interlock; connector for remote safety interlock; fast-acting magnetic circuit breaker in output to protect high voltage circuits and external load; thermal overload breaker to protect input circuits; long-life silicon high voltage rectifiers; metered return and bypass return terminals for measurement of load (leakage) or bypass (guard) currents.

Request Mobile DC HYPOT Bulletin 5-1.16

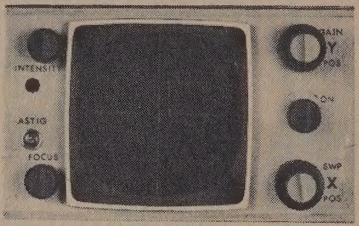
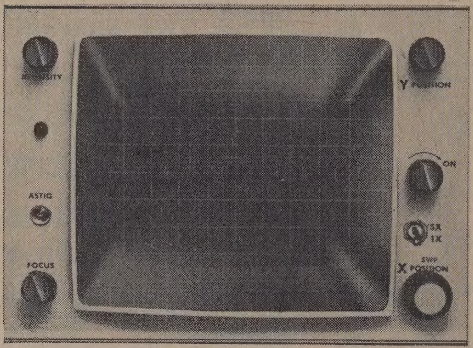
BENRUS CRT DISPLAYS

- **Bandwidths to 25 MHz**
- **Sensitivities to 1 mv/div**
- **Meet MIL SPEC Environmental Requirements**





1. You select panel height.

Units mount on standard 3½", 5¼", 7" rack panels.

2. You select amplifier characteristics.

Many bandwidths and sensitivities are available, for either or both channels.

3. You select sweep, if desired.

Either "A" or "B" channel may be swept; choice of 40 speed ranges.

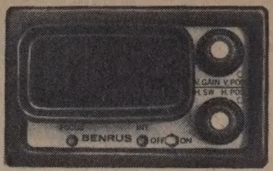
To the combination of your choice you may now add, if desired, any of many optional features. The result is a standard, off-the-line instrument, custom-assembled to meet your exact requirements.

For optimum panel-mounting efficiency, the units have been designed to exact modular dimensions.

The CRT Displays have integral power supplies and are fully self contained. Complete description, specifications, and ordering information are given in Catalog #802. Ask your rep for a copy, or write direct.

BENRUS SOLID STATE, LOW COST. COMPACT

X-Y INDICATOR



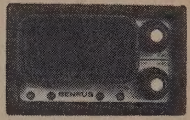
3" Type RA840C

- Bandwidth: DC to 200 KHz (3 db).
- Sensitivity: 1 v/cm to 10 v/cm.
- Rise time: 1.5 μs.
- DC coupled blanking provided.
- Compact—behind panel depth less than 10½".
- Identical X and Y amplifier characteristics.
- Complete—ready to operate.

BENRUS SOLID STATE, PANEL MOUNTING

MONITOR OSCILLOSCOPES

DC to 500 KHz



3" Type RA840B

5" Type RA850

These instruments are ideal for applications where economical, stable, dependable monitors are needed. They are compact, light in weight, low in heat dissipation, require only AC line power. Units with on-off blanking and grey scale modulation are available. Up to three 3" models can be mounted on a standard 3½" panel; two 5" models on a standard 5¼" panel. **Conform with MIL SPEC environmental requirements.**

While designed primarily for panel mounting, the units are fully cased and may be safely operated on the bench.

Plug-in Flexibility—A full line of plug-in vertical and horizontal amplifiers, trigger and sweep circuits are available, and may be used interchangeably on either the Type RA840B or the Type RA850 scopes. The range includes X and Y amplifier channels from DC to 500 KHz with 10 mv/cm to 2 v/cm sensitivity, free-running sweep circuits with sweep frequency rates from 0.2 Hz to 10 KHz, and triggered sweeps with speeds from 1 sec/cm to 10μsec/cm.

POWERSTAT®

Variable Transformers

now with POWERKOTE COILS

Most specified by industry, POWERSTAT Variable Transformers with new epoxy-coated POWERKOTE Coils give an average of 20% higher current ratings, 10:1 greater overload capability, longer life, greater resistance to fungus, salt spray and other contaminating atmospheres. Also feature excellent regulation, negligible waveform distortion, conservative ratings, high efficiency, precious-metal plated commutators and rugged construction. All manually operated types listed in the chart (except the 10B and 12 series) are also available with motor drives in speeds of 5, 15, 30 or 60 seconds for full range travel. Ratings for ganged assemblies can be easily calculated from single unit ratings given in the chart. Types are available up to 244 kva.

Z-MATCH

WIDEBAND TRANSFORMERS

The most widely used component for • **IMPEDANCE MATCHING** • **ANTENNA MATCHING** • **PHASE DETECTION** • **INPUT, OUTPUT, and INTERSTAGE COUPLING** • **FREQUENCY MULTIPLICATION** • **INSTRUMENT PROTECTION against DC-SURGE BURNOUT** • **VOLTAGE or CURRENT STEP-UP and STEP-DOWN.** Low Insertion Loss and VSWR. Power handling: 2-4 watts. Rugged, epoxy encapsulated package. See Bulletin 103.

We also make a stock line of **WIDEBAND HYBRID JUNCTION/ TRANSFORMERS** which are very useful for **DOUBLY BALANCED MIXERS** and for **VECTOR ADDITION and SUBTRACTION.** They are all DC isolated. Write for Bulletin 368.

NEED CATHODES?
WANT ON-TIME DELIVERY?

It's a reasonable request. And Superior gives you tangible assurances. First, every cathode we make is for our customers—none for ourselves. Second, we have two large, modern plants, located about 600 miles apart, with identical facilities to protect you against delays. And you can choose from the widest variety of cathode types and materials in the field. So why do you suppose we are the world's leading independent cathode supplier? Send for our Catalog 52. Dept. 2506.

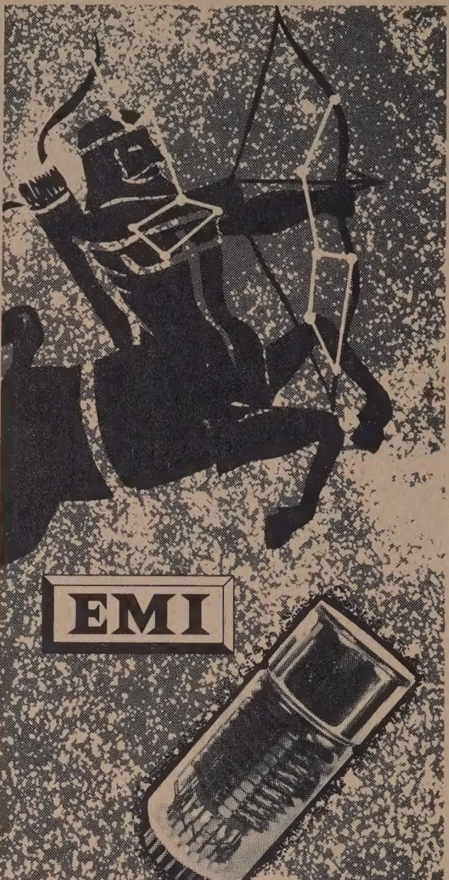
WORKHORSE!



TYPE 9750

Nothing fancy, and not expensive. Just a good old 10 stage photo-multiplier but: It has a superb bialkali cathode with excellent collection efficiency (which is fundamental for good S/N ratio), highly stable CsSb dynodes which provide a gain of 10^6 at just over 1,000 volts, and a dark current of 10^{-10} A. at that voltage (50 A/L).

As usual EMI has provided a number of variations: 9750QB with a spectrosil window for UV and low level counting applications, (liquid scintillation) 9750B with Pyrex window for visible applications, and finally 9750KB for those who prefer the B-14A overcapped base. In the "K" configuration, it is directly interchangeable with our 9656KB or a number of competitive types.

The 9750 with its high quantum efficiency and low dark current gives excellent resolution for low energy gamma rays. When used with a thin two inch sodium iodide crystal with a beryllium window, the resolution for Fe^{55} is of the order of 40%.

Flying spot scanners, photometers, thermoluminescent dosimeters, low level scintillation counting are all applications for which the 9750 is highly suitable. Detailed specifications on request from:

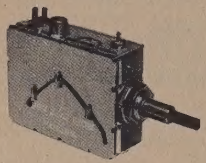
TO USE OR NOT TO USE the Mitsumi Components, THAT IS THE QUESTION to improve your products

MITSUMI COMPONENTS are manufactured at the most modern production plants where the latest manufacturing equipment and facilities of automatic system are employed, resulting in perfect uniform quality of the products.

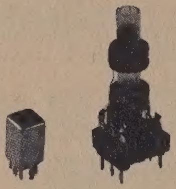


UHF TV TUNERS

Mitsumi UHF TV tuners are high in accuracy and excellent in durability because not only materials, configurations and platings but also soldering of their mechanical sections were well researched and developed. They are available at present in 3 models.

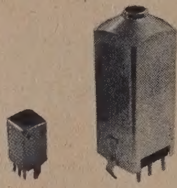
VHF TV TUNERS

Mitsumi VHF TV tuners are provided with a change-over switch to a UHF tuner, and have built-in IF amplifier and AGC(automatic gain control). They are presently avaialble in 3 models.



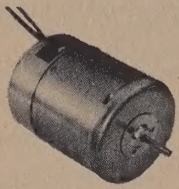
VARIOUS COILS

Mitsumi coils available at present are those for television receivers, heterodyne receivers, composite circuits(PACK) for IF detection, FM multiplex, FM tuners, etc.



IF TRANSFORMER

There are many kinds of models for the use of television and radio receivers, various electronic equipments, etc. They are all specially quality-controlled so as to have stabilized mechanical characteristics and excellent electrical characteristics, and they are mass-produced by the full automatic coiling machines on the belt conveyor system.



MICRO MOTORS

At present, 11 models are available as those for small tape recorders, 8mm cinecameras, measuring instruments and so forth. They are excellent in starting movement, low in noise and long in life, resulting in the extremely stabilized revolutions. Super-flat type models are also available.

SYNCHRONOUS MOTORS

Mitsumi synchronous motors have the extremely high response and low revolving speed, resulting in less wear of bearings and moving parts, and higher durability.

POLYVARICON (POLYETHYLENE VARIABLE CAPACITORS)

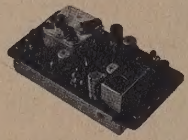
Polyvaricon is a miniature variable capacitor that was developed by our company. It has small size, light weight, strong resistivity for howling, excellent Q characteristics, high durabilities for use, temperature and humidity. Various models for AM and FM are available.

TRIMMER CAPACITORS

Mitsumi trimmer capacitors are superb in Q characteristics, and temperature and humidity characteristics. Various models for BC, SW and FM bands are available in 2 kinds of film trimmer capacitor and air trimmer capacitor.

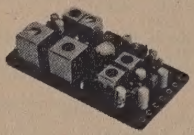
CdS PHOTO-CONDUCTIVE CELLS

Mitsumi photo-conductive cells having 8 patents, can obtain spectro-wavelength characteristics which match their purpose of use, due to the development of new sintered film. Presently available are 16 model including their applied products.



FM TUNERS

They are all transistorized, and the output IFT has 2 types, namely, single tuning type and double tuning type. The employed transistor is either silicon transistor or germanium transistor.



FM MULTIPLEX ADAPTER

It employs transistors, and has a built-in automatic stereo-monaural indicator. Separation is so good as more than 25dB at 300Hz ~ 4KHz. Distortion (content of higher harmonics) is negligible, and temperature characteristics are excellent.

HYBRID IC

There are 2 types of hybrid integrated circuits, namely, thin film type and thick film type. They are most suitable for such consumer electronic products as radio receivers, television receivers, stereo players, etc. Besides, variable-capacity diodes of MOS type were also developed.

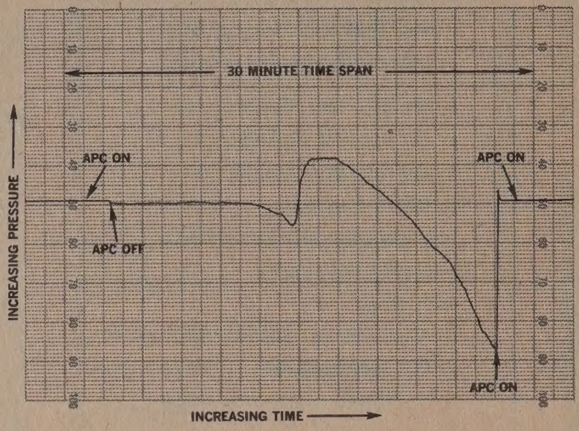
Can pressure fluctuations spoil your vacuum process or experiment?



Pressure versus time record for a typical 2-inch oil diffusion pumped system.

Granville-Phillips' Automatic Pressure Controller can reduce these fluctuations and control pressure accurately and continuously...the same way you now control other variables such as temperature, voltage, and time interval.

Manual regulation of pressure to the tolerances required by applications such as sputtering, gas mixing, filling of flash tubes and lasers, pumping speed measurements, isobaric sorption, and other controlled processes can be tedious and time consuming. Granville-Phillips' Automatic Pressure Controller (APC) can eliminate this tedium by accurately and continuously controlling the pressure required by the application.

For example, sputtering rates can be automatically controlled by using an APC whose input signal is derived directly from the sputtering current . . . gas mixing can be controlled as easily as total system pressure by using one or more partial pressure measuring devices to feed a signal to one or more APC's . . . and the APC has a sufficiently tight control loop so that it can be used to rapidly raise the pressure in a closed system, such as a flash tube or laser, to a specified value.

The APC is simple to use and will operate from the electrical output of most pressure or pressure related transducers. It continuously monitors the transducer signal and automatically adjusts the flow of gas into the vacuum system to maintain the signal, and therefore the system pressure, at a preset level. This ability of the APC to make the rapid, continuous adjustments necessary to maintain a constant system pressure exceeds both the patience and competence of most human operators.

The APC servo-valve is all-metal and bakeable in the open position to 450°C with the servo-driver removed. These clean features eliminate the possibility of process or experiment contamination by high vapor pressure materials such as might be found in a valve using elastomer seals.

If your vacuum process or experiment is affected by pressure fluctuations and is so valuable that you control other variables such as temperature, voltage, and time interval; contact us. Our APC can take over the tedious job of pressure control . . . and free you for more important activities.

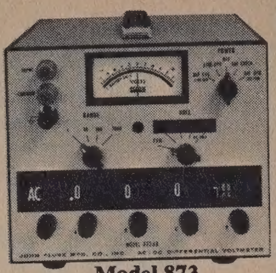
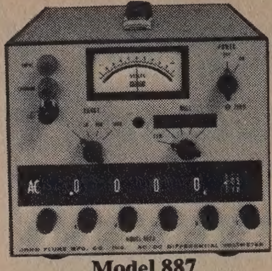
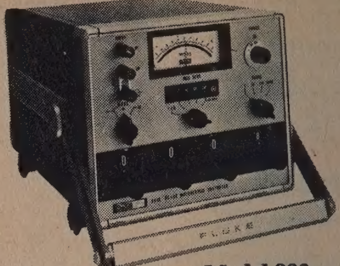
Fluke AC/DC Differential Voltmeters



Model 873



Model 887



Model 893

Fluke solid state AC/DC Differential Voltmeters offer the widest range of performance and accuracy in the market. Most units operate from either internal rechargeable batteries or 115/230 V, 50-440 Hz line power. Battery power is essential for measurement where maximum accuracy demands complete line isolation. Input ranges are 1, 10, 100 and 1000 volts, each with 10% overranging. Decimal point placement is automatic with range selection on all models.

Fluke voltmeters are electrically and mechanically designed to perform under the extremes of temperature, shock, vibration and humidity. Each zener diode reference is processed, computer matched and selected to establish excellent stability and temperature coefficient tracking. Fluke manufactures all of the precision wire wound resistors used. All solid state voltmeters are lightweight for portability and are provided with a tilt-back bail or functional detented handle for operator convenience. Recorder output is available on all Fluke differential voltmeters.

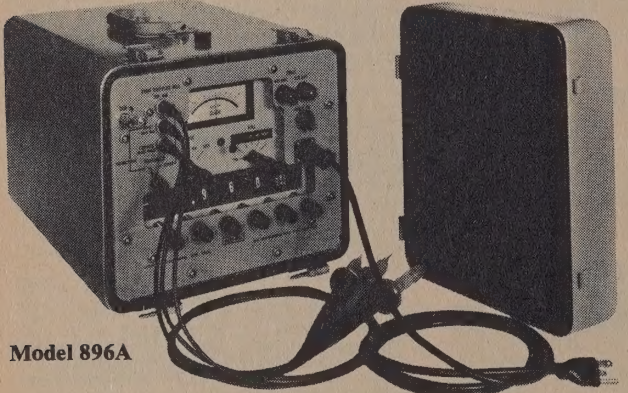
Fluke DC Differential Voltmeters

Fluke solid state DC Differential Voltmeters offer the widest range of performance and accuracy in the market. Most units operate from either internal rechargeable batteries or 115/230 V, 50-440 Hz line power. Battery power is essential for measurement where maximum accuracy demands complete line isolation. Input ranges are 1, 10, 100 and 1000 volts, each with 10% overranging.

Fluke voltmeters are electrically and mechanically designed to perform under the extremes of temperature, shock, vibration and humidity. Each zener diode reference is processed, computer matched and selected to establish excellent stability and temperature coefficient tracking. Fluke manufactures all of the precision wire wound resistors used. All solid state voltmeters are lightweight for portability and are provided with a tilt-back bail or functional detented handle for operator convenience. Recorder output is available on all Fluke differential voltmeters.



Model 896A

The new Fluke Model 896A represents an outstanding expansion of the capabilities and applications of the Model 895A DC Differential Voltmeter. Features of the new unit include the ability to measure ±15 Kv at multiplier input, measure ±1100 volts potentiometrically with up to ±5 Kv DC common-mode, mil-spec combination case and splashproof panel, and 100 μv full-scale sensitivity with 6 digit readout. The unit meets the MIL-E-16400 environmental spec.

New Fluke Digital Voltmeters

The new Fluke family of digital voltmeters uses circuit disciplines never before adapted to this kind of instrumentation. Models 8100A and 8300A offer an analog to digital conversion technique based on storage capacitors, a single BCD counter and a resistive ladder network to serially determine and display all digits. MODEL DP 100
DC PLUG-IN

This all-solid-state precision measurement system offers unlimited expansion capability through plug-in additions, resulting in a specialized instrument for each type of measurement. New plug-ins now broaden the measurement capability of this field-proven unit. Over 10,000 are in use at present.

Scaling controls make possible resolution of up to seven digits on the three-digit display by utilizing the overrange capability of many of the plug-ins, thus providing high resolution and accuracy with minimum investment. Companion devices such as the PR 4900 Digital Printer and 1050 Digital Set-Point Controller further extend the utility of the DMS 3200 System.

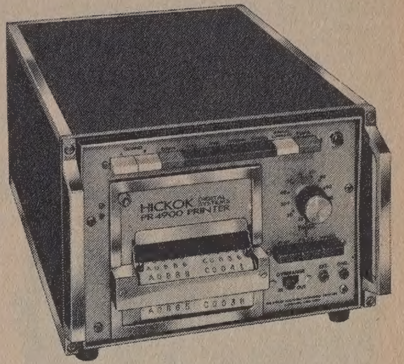
DIGITAL PRINTER



From $760

This professional printer provides print-out of up to 10 columns of digital information from one or two independent sources. It is a companion unit to the Hickok DMS 3200 Digital Measuring System; however, it may be used with any device which provides 10-line decimal or BCD coded data outputs. Voltage, frequency, time period, resistance, capacitance or event counts are examples of data which may be recorded in printed form on paper tape for storage and future reference.

DIGITAL SET-POINT CONTROLLER

HICKOK DIGITAL SYSTEMS

$295

The Model 1050 Digital Set-Point Controller, when used with the Hickok DMS 3200 Digital Measuring System, can start and/or stop the operation of any peripheral function at predetermined measurement values, as selected by the operator. Set-points are absolute, assuring start or stop functions at specific values with zero set-point error.

When used with the DMS Main Frame and the appropriate DP Series plug-in digital measurements of voltage, frequency, period, resistance, capacity, events (and with appropriate transducers, pressure, flow, temperature, strain, etc.) can be used to activate external mechanical feeds, drives, print-outs, reject hoppers, feed motors, fuel adjustments, blowers, tabulation recorders, etc.

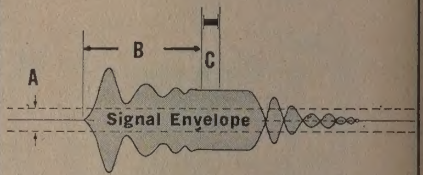
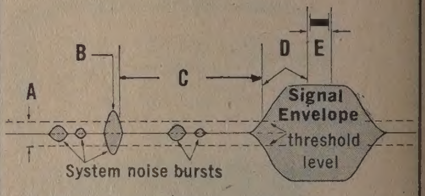
SAMPLING
VOLTMETER

LETS YOU FORGET PEAK DETECTION
AND STORAGE OSCILLOSCOPES!

Model 215 Can measure the average value of an AC signal at a predetermined time with sampling periods as short as 100 microseconds.



A. Adjustable threshold 4 - 20% of full scale
B. Count cycles or provide a delayed trigger and sample after initial transient
C. Sampling periods of 0.1, 1.0 and 10 milliseconds depending upon signal frequency, 100 H_Z to 1 m H_Z



A. Adjustable threshold 4 - 20% of full scale
B. If this noise burst exceeds the threshold, provide a trigger any time in C
D. Sample 3 to 30 cycles after threshold
E. Sampling period

A. Signal envelope as the result of programmed voltage, current, frequency, etc.
B. Provide a delayed or coincident trigger for each programmed step or initiate the next step automatically after sampling
C. Sampling period

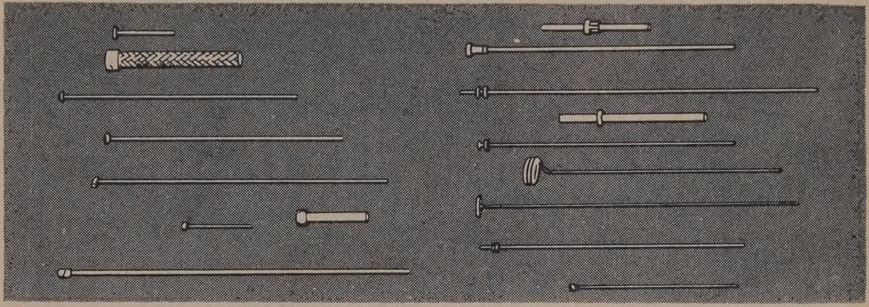
Get more precise wire forms and small metal stampings . . . more economically.

ARTWIRE KNOWS HOW!

Art Wire's automatic equipment is geared for high-speed production, precision and economy . . . three big reasons why we can produce wire forms and small metal stampings at big savings to you.

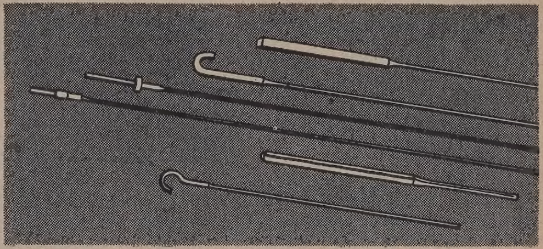


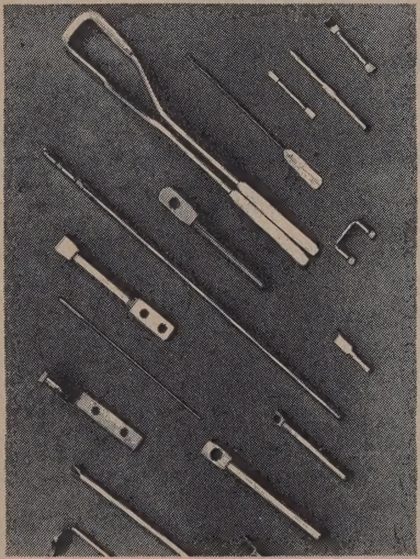
TERMINAL LEADS

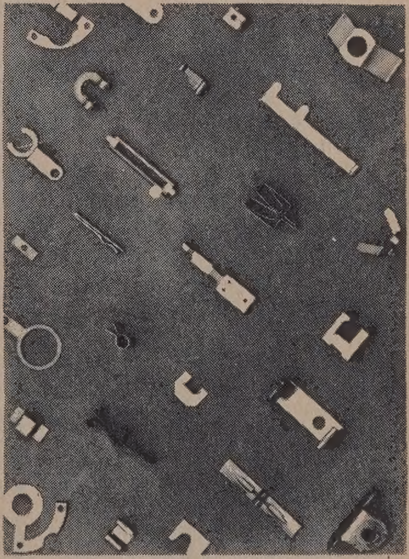
For use in resistors, transistors, relays, etc. Wire diameters from .008 to .125. Perfectly concentric heads in diameters up to 4 times the wire diameter.

SWAGED LEADS

One-piece construction eliminates welded joint failures and resistance, increases rating output. In diameters from .015 to .080, necked down to as much as 50% original diameter.







WIRE FORMS

Shape and design limited only by the imagination. Available in round wire from .005 to .125 diameter, flat stock and ribbon.

FLATTENED, NOTCHED AND PIERCED PINS

In great variety to meet all needs for improved sealing, connections, etc., in wire as fine as .015 to .125. Rounded or square cut ends. Shaped to your specifications.

SMALL METAL STAMPINGS

Produced to specifications from all the basic metals and precious metals. Processes include stamping, blanking, forming and piercing.

Send blueprints or sample for estimate or write for catalog.
